SUMMARY

Software engineer with 10 years of experience building web products in payments and e-commerce, specializing in frontend architecture, accessibility, and experimentation. Currently applying a software background to building-automation systems at Emcor.

EXPERIENCE

Emcor — Graphic Designer (Building Systems Integration)

March 2026 – Present

- Build and maintain building interfaces in Tridium Niagara and EnteliWEB across commercial sites
- Create equipment and site-plan graphics from technical drawings
- Integrate physical devices into each site's building-management system (BMS)
- Develop programs to automate station updates

Intuit — Software Engineer 2, Payments

April 2021 – June 2025

- Rebuilt and A/B tested the Instant Deposit onboarding experience, doubling customers onboarded and overall Instant Deposit volume
- Built and maintained components across a microservice architecture, design system, and plugin ecosystem
- Integrated observability via Splunk and Amplitude with custom alerts; led legacy React refactor using hooks and optimized network requests
- Mentored interns and new hires, helping them transition to full-time roles

Tailored Brands — Lead Front-End Web Developer

October 2018 – April 2021

- Led 5+ developers across standups, workload distribution, and code reviews; shipped on biweekly sprints with engineering, business, and creative teams
- Designed and ran 100+ A/B tests for the Men's Wearhouse website, generating over \$50 million in projected incremental revenue within a single year

PROJECTS

Classic Scoundrel (classicscoundrel.com) — browser card game in TypeScript, Canvas 2D, and custom WebGL shaders with no frameworks; full keyboard navigation and a 770-test suite with mutation testing.

prefers-reduced-motion.com & **prefers-color-scheme.com** — accessibility reference sites documenting CSS media queries for developers.

Rogue Survivor — 2D roguelike survival game built on a bespoke engine with enemy AI.

TECHNICAL SKILLS

Languages & frameworks: TypeScript, JavaScript, HTML5, CSS3, React, Next.js, Redux

Testing & quality: Unit, integration, and automation testing (Jest, Playwright, Vitest); mutation testing

Data & experimentation: PostgreSQL, MongoDB, Splunk, Amplitude, A/B testing, Heap, Google Analytics, Tag Manager

Accessibility & building automation: WCAG-aware development, prefers-reduced-motion / prefers-color-scheme, keyboard-navigable interfaces; Tridium Niagara N4, EnteliWEB, BMS integration

CERTIFICATIONS

Tridium Niagara N4 Technical Certification — passed with 99%

EDUCATION

University of California, Santa Cruz

Cognitive Science BS, Computer Science BA | Fall 2013 – Spring 2016

NSF-funded Smart Energy project contributor; CSSA webmaster; coursework in ML, AI, and HCI.
